In our second year facing a president and a Congress who seem hostile toward our environmental goals, we at Environment Colorado made a conscious decision to do more than just play defense.

We pursued a strong, forward-looking agenda for three reasons:

First, the planet can’t wait. The survival of wildlife in our oceans depends on whether we curb plastic pollution now, not two or six years from now. Ditto for the quality of the air we breathe and the water we drink, the sources of the energy that powers our lives and the stability and suitability of our climate.

Second, success breeds success. When one community or college campus commits to renewable energy, another is more likely to follow their lead. When litigation compels one company to curb its pollution, others feel greater pressure to fall in line. When citizens succeed in reducing the use of one form of single-use plastics, they’re emboldened to try to reduce the next.

Third, ultimately winning—and defending—strong environmental protections depends on us winning enough hearts and minds to our cause to make any politician think twice about devaluing the environment, no matter the pressure applied by polluting industries or other interests.

In these pages, you’ll find reports on our vigorous efforts to defend Colorado’s clean water and air laws, our national parks and other public lands and our progress on global warming. But you’ll also find examples of our work with cities and communities to reduce plastic pollution, with companies to reduce deforestation and comply with pollution limits, with college campuses to embrace renewable power, and much more—work that’s paying off in positive results now for our environment.

The places we love will always need defending. But defending what we’ve already won isn’t enough. We want to live in, and leave to our children, a greener, healthier world than the one we live in today. That’s what we’re working for. Your action and support make it all possible, and for that we are deeply grateful.

Garrett Garner-Wells
State Director, Environment Colorado
Environmental Defense: Our Climate

For much of the early part of 2018, the Trump administration hinted at plans to roll back federal clean car standards aimed at keeping greenhouse emissions at bay. Environment Colorado Research & Policy Center was ready, holding rallies in support of clean car standards and citing then-Environmental Protection Agency Administrator Scott Pruitt for recklessly endangering our climate and health.

Environment Colorado, our members and coalition partners submitted hundreds of thousands of public comments to the Trump administration opposing rollbacks of the clean car standards and other crucial environmental protections. In Washington, D.C., our national network’s advocates stood up for climate science and worked to defend the Clean Power Plan, one of the best tools we have for reducing global warming pollution from power plants.

Colorado advances clean car standards

In June 2018, Gov. Hickenlooper put Colorado on the road to a cleaner, healthier future. The governor’s executive order to adopt clean car standards made Colorado the first state in the interior of the country to chart the path of enacting these standards, and will give Coloradans strong safeguards from air pollution caused by gasoline and diesel vehicles. This announcement follows Environment Colorado’s long term work to encourage Colorado to join 13 other states as leaders in clean air and clean car technology.
Clean, Green & Renewable

Our energy program seeks concrete steps toward a world in which we conserve more, use the energy we have more wisely and efficiently, and rely only on sources of energy that are clean, renewable and tread lightly on the planet.

Ben Hellerstein (left), state director of our national network’s Massachusetts office, led a campaign that convinced lawmakers to commit to more renewable energy. At right, intern Katherine King.

State Director Garrett Garner-Wells and Denver Mayor Michael Hancock at the mayor’s announcement that Denver will power itself with 100% renewable electricity by 2030.
Renewable energy just kept winning

It was a year full of milestones for renewable energy and our work to promote it. Environment Colorado worked to make our state part of the renewable revolution, and our national network did the same nationwide.

100% Renewable

Renewable energy is booming in Colorado. The 2018 edition of Environment Colorado Research & Policy Center’s “Renewables on the Rise” report looked at the past 10 years of growth in the industry, and found that Colorado generates 25 times more electricity than from the sun and three times more wind than we did a decade ago—enough to power roughly 1 million homes.

Environment Colorado worked with cities and college campuses around the state to help them become renewable energy leaders. Our grassroots campaigns delivered Colorado residents the facts to show that a 100 percent renewable future is within reach, while our advocacy team organized supporters to win clean energy commitments in Longmont and Denver.

In the General Assembly, we supported legislation to put Colorado on a path to 100 percent renewable energy and will continue advocating for a clean energy future in 2019.

Go Solar

Every year enough sunlight shines on America to provide 100 times more power than we need. Last year, Environment Colorado’s Go Solar campaign moved us closer to realizing that potential. Go Solar is working with 50 American cities, including Denver, to urge them to think bigger, act smarter and tap the sun for more power.

Environment America Research & Policy Center published a guide titled “Ten Ways Your City Can Go Solar,” providing a roadmap for mayors to making their cities leaders in solar. In March, 180 mayors from across the country signed a letter resolving to be leaders and advocates for solar energy. Eight Coloradan mayors signed on: Breckenridge Mayor Eric Mamula, Manitou Mayor Nicole Nicoletta, Telluride Mayor Sean Murphy, Former Edgewater Mayor Kris Teegardin, Golden Mayor Marjorie Sloan, Louisville Mayor Bob Muckle, Lafayette Mayor Christine Berg and Nederland Mayor Kristopher Larsen.
Conservation

In a world of incredible material abundance, our conservation campaigns work to bring more nature into our lives and to protect and preserve our open spaces, wild places and wildlife for their own sake.

Colorado Rep. Chris Hansen (center), State Director Garrett Garner-Wells (right from center) and the Denver canvass office after a briefing.

Alaska’s Tongass National Forest, the world’s largest temperate rainforest, is protected by the Roadless Area Conservation Rule. Our national network was instrumental in putting those protections in place 17 years ago, and we defended them last year from attempts to take them away.
Action in defense of wildlife

Last year, we ran campaigns to defend and promote more open spaces, wild places and wildlife. We pushed for concrete solutions to the world’s plastic waste problem, and to keep our beaches and coastal waters safe from offshore drilling. We put our expertise and people power to work to protect bees and other pollinators from lethal pesticides and to keep our public lands safe from destructive development.

Wildlife Over Waste

Last year, we launched our campaign to ban polystyrene foam—what most people call Styrofoam—which is one of the worst, and most common, forms of plastic pollution.

Though we only use polystyrene products like foam cups and take-out containers for a few minutes, they can persist in our environment and harm wildlife for centuries. That’s why Environment Colorado began calling for a statewide ban on polystyrene containers last summer. We also worked to build momentum in cities and towns across Colorado to pass local bans on polystyrene.

Across the country, our national network has already seen results. In Texas, major sandwich chain Thundercloud Subs committed to phasing out polystyrene. In Maryland, Baltimore and Anne Arundel County both passed polystyrene bans.

Tropical Forest Protection

Every hour, our planet loses 1,000 acres of forests—along with the animals that depend on these forests for their survival. That’s why Environment Colorado launched a new campaign last year to convince U.S. companies to stop cutting down any tropical forest—a commitment known as “zero deforestation.”

Through blogs and social media campaigns, our staff made the case for tropical forests as vital resources to be protected, not slashed and burned for profit.

Our organizers focused their efforts on Cargill, a major player in the global food industry headquartered here in the United States. More than 13,900 people signed our petition urging the company to lead the shift to zero deforestation.

No Bees, No Food

Bees are in decline, and the potential consequences for our food supply are devastating. All across the country, our national network pushed for bans on a class of bee-killing insecticides known as neonicotinoids (or neonics), which have been linked to bee die-offs. We gathered 219,000 public comments to the Environmental Protection Agency calling for a neonic ban, and urged states to join Connecticut, Maryland, Minnesota, New Jersey and Oregon in taking action against neonics.
Clean Water & Air

From holding water and air polluters accountable to uniting local clean water champions, our national network’s Clean Water & Air program promotes a world in which these precious, life-giving resources are no longer treated as dumping grounds for our waste.

▲ **Victory No. 1:** A $1.4 million settlement to clean up the Suwannee River Basin in Florida.

▲ **Victory No. 2:** A $2 million agreement to curb pollution from the world’s largest steel company in Pennsylvania.

▲ **Victory No. 3:** A $3 million settlement in Texas to stop clean air violations at an oil refinery near Houston.
Illegal pollution stopped, action taken on lead contamination

Last year, Environment Colorado and our national network provided the action, research and advocacy to protect the water we drink and the air we breathe.

Environment America Litigation Project

Environment Colorado is part of a national network that researches cases of illegal pollution in Colorado and across the country, and takes polluters to court if necessary. Our litigation team had a banner year nationally, settling three major lawsuits.

In Pennsylvania, our state affiliate PennEnvironment took ArcelorMittal, the world’s largest steel company, to court over hundreds of violations of the Clean Air Act. The company eventually agreed to a $2 million settlement. Our partner group Environment Florida sued chicken producer Pilgrim’s Pride over discharges of toxic wastewater into the Suwannee River, ultimately reaching a $1.42 million settlement—$1.3 million of which will be used to clean up the Suwannee Basin. Environment Texas won a major settlement in our Clean Air Act lawsuit against Pasadena Refining System Inc., a subsidiary of Brazilian state-controlled oil company Petrobras. The terms included pollution reduction upgrades and $3,525,000 in civil penalties, most of which will go to fund a clean vehicles project.

Water threats identified

Environment Colorado Research & Policy Center worked to put a spotlight on threats to our water. Our “Get the Lead Out” report sounded the alarm about the unacceptable prevalence of lead contamination in the drinking water of schools all across the country. As kids headed back to school last fall, Environment Colorado Research & Policy Center released a toolkit to help parents take action at the local level to get the lead out of their children’s drinking water.

Environment Colorado Research & Policy Center also released a report titled “Troubled Waters,” which identified industrial pollution threats to waters throughout the country, and launched an interactive map to help pinpoint pollutants in the Delaware River.

When the Trump administration proposed cutting the Environmental Protection Agency’s budget by nearly a third, Environment Colorado Research & Policy Center released a series of reports titled “Rough Waters Ahead,” illustrating the damage those cuts would cause to our waterways in a way budget numbers alone couldn’t capture.

Clean Water Network

Through the Clean Water Network (CWN), Environment America Research & Policy Center brings together more than 250 local and regional groups dedicated to protecting clean water across the country, allowing them to build deep networks of coordinated support. Last year, we expanded the CWN into Alabama, uniting experienced watershed groups into a coalition.
