Ready to say goodbye to the Trump administration’s Dirty Water Rule? So are we. Thankfully, we took a big step in that direction.

This summer, the Environmental Protection Agency (EPA) announced its plan to repeal and replace the “Dirty Water Rule”—a Trump administration policy that left the drinking water of millions of Americans at risk from polluters.

It’s the latest round in a decades-long debate over the Clean Water Act—and for our research partners at Environment America Research & Policy Center, it’s progress years in the making.

**Decades-old protections restored**

Fifty years ago, water pollution ran virtually unchecked, putting public health and the environment at risk. The solution? The 1972 Clean Water Act, which set enforceable, clear limits on what polluters could dump into our waterways.

For decades, the Clean Water Act yielded progress toward cleaning up and protecting our waters. But in 2006, a Supreme Court ruling left 20 million acres of wetlands and more than half our nation's streams without clear protection under the Act.

From the Chesapeake Bay to Puget Sound, streams and wetlands protect our larger waterways, filtering out pollutants and providing wildlife habitat. Plus, the streams put at risk by the 2006 ruling help provide drinking water to 117 million Americans.

In the face of this dirty ruling, our national network got to work.

Environment America Research & Policy Center and the rest of Environment America’s national network worked to bring the Clean Water Act back to its full water-saving potential.

We assembled more than 1 million supporters and 1,000 influential voices, including business owners, elected officials and more. Our research partners issued reports on the necessity of water protections while our advocates lobbied 50 congressional offices and advocated in front of Congress and the EPA.

59,000 supporters, 40 lawmakers tell Whole Foods to put ‘planet over plastic’

A massive environmental crisis requires a massive call to action.

That’s why our research partners at Environment America Research & Policy Center, along with our friends at U.S. PIRG Education Fund and the Student PIRGs, delivered a letter to Whole Foods on May 6, 2021—signed by nearly 60,000 supporters, including 40 state lawmakers—calling on the grocer to phase out single-use plastic packaging in its stores. Once an environmental leader that stopped providing plastic bags to its customers at checkout in 2008, Whole Foods recently earned an “F” for its plastic policies in a report by environmental group As You Sow.

“Nothing we use for just a few minutes should pollute our rivers and oceans for hundreds of years,” said Kelsey Lamp, Protect Our Oceans campaign director for Environment America Research & Policy Center, our research partners. “That’s why the companies that rely on single-use plastic to package their products must adopt more sustainable packaging options or eliminate single-use plastic packaging altogether.”

“Change is possible, and Whole Foods should lead the way to a future where we put the planet over plastic.”

Back on course: Biden administration moves to allow states to set stronger vehicle emissions standards

For nearly 50 years, federal law allowed California to set stronger clean air standards and more than a dozen other states to follow California’s lead—until the Trump administration tried to revoke their authority.

On April 26, the Biden administration started the process of undoing this action—checking off one of the “First things to fix” identified by our national research partners at Environment America Research & Policy Center, in a series of 20 recommendations shared with the Biden team before they took office.

“Thank you, President Biden, for taking this first step,” said Morgan Folger, Destination: Zero Carbon campaign director with our research partners at Environment America Research & Policy Center. “Now it’s time to reaffirm that states can and should lead the way for clean air and cleaner cars.”

Vehicle tailpipes are a major source of climate-changing, health-harming air pollution. A report by our research partners showed that in 2018, 108 million Americans lived in areas that experienced more than 100 days of degraded air quality.

Report: After years of advancement in clean energy technology, it’s clear that ‘We Have The Power’

It’s time for our country to move beyond fossil fuels—and fortunately, we have the power to realize our clean, renewable energy potential.

That was the finding of the latest edition of Environment America Research & Policy Center’s “We Have The Power” report, released this past June. According to the report, America has the technical potential to meet all its electricity needs many times over with wind and solar energy.

“To a visitor from an earlier century, America in 2021 would be unimaginably advanced in all ways but one: We still rely on dirty and dangerous fossil fuels to meet our energy needs,” said Susan Rakov, chair of Environment America Research & Policy Center’s Clean Energy program.

“But it doesn’t have to be that way. This report shows that between the sunshine and the wind, we have the potential to run our society on clean energy, today and in the future.”

And in 2015, we won: The Obama administration enacted the Clean Water Rule, which protected our waterways once more.

**Restoring hope after attacks**

Then, the Trump administration vowed to repeal the Clean Water Rule on day one—and it even planned on replacing it with a policy known as the Dirty Water Rule.

So, Environment America Research & Policy Center stepped up again—organizing thousands to stop the Dirty Water Rule.

Despite our best efforts, the Dirty Water Rule was finalized in 2020 and reopened the floodgates for polluters. This new rule has left half our remaining wetlands and thousands of streams without federal protection.

But all hope was not lost: That same grassroots support—yours included—fueled our campaign to repeal the Dirty Water Rule.

First, we joined other groups in suing the Trump administration’s EPA. Second, we made sure the incoming Biden administration saw the overwhelming public support for stronger clean water protections.

Then, we saw progress: The EPA announced its intention to reverse the Dirty Water Rule.

But intention is not implementation—our work is far from over. Many of our waterways are still at the mercy of polluters. So we’re calling on the EPA and the U.S. Army Corps of Engineers to permanently protect our waterways.

The Clean Water Act turns 50 next year—and with your support, we will work to ensure that all our nation’s waters are protected under this bedrock environmental law.

By John Rumpler, Clean Water for America campaign director

In 2014, an Environment America-led coalition delivered more than 700,000 comments from Americans to the EPA in support of restoring protections to the nation’s streams and wetlands.

Thank you for supporting our work to take on the vast environmental challenges we face and to create a greener, healthier, more sustainable world. In these pages, you’ll find the stories of the advocacy you made possible.

Your action and support allow us to keep working for a better world. Thank you.

Over 47,000 supporters tell Amazon: Stop selling bee-killing pesticides

To save the bees, our staff have asked the world’s largest online retailer to stop selling the pesticides that kill them. And we’re not alone.

In March, Environment America and our national network kicked off our campaign to convince Amazon to take neonicotinoid pesticides (or “neonics”)—the substances linked to a troubling decline in bee populations—off its (virtual) shelves.

By August, campaigners with our network have collected more than 47,000 petition signatures online and in 10 communities across the country.

“We need to reduce the use of this pesticide that’s contributing to the collapse of our most important pollinators,” said Malia Libby, our national Save the Bees campaign associate. “Amazon should join other retailers in doing the right thing and taking it off its shelves.”

Our ask is far from unprecedented: The Home Depot and Lowe’s have already pledged to phase out the use of neonics on their live plants, and Lowe’s has committed to taking the pesticides off its shelves altogether.

Our national network’s summer canvassers talked to tens of thousands of people across the country about our campaign to get Amazon to stop the sale of bee-killing pesticides.
